TIGER MILK MUSHROOM

A Malaysia's National Treasure ~ 400 YEARS OF MEDICINAL USE

This valuable mushroom has been used traditionally as a health tonic to treat more than 15 medical ailments, including cough, asthma, joint pain, fever, some cancers, food poisoning, indigestion and gastritis.

Speaking during the International Convention on Biotechnology in 2002, Tun M had shared that his chronic cough stopped after he consumed a Chinese medicine containing Tiger Milk Mushroom.

“Persuaded by a Chinese friend, I took some Chinese medicine and the cough stopped. When I had another attack, I tried the medicine again, and again it worked. I tried to find out what medicine is made of and I was told that it was tiger milk mushroom,” said Tun M in his keynote speech.

Tun Dr. Mahathir Bin Mohamad
